- MS Office & Visio
- TOAD
- UML Modeling
- XCode

Experience

Sr. Software Architect

DP DHL US (Global Mail and eCommerce)

May 2005 – December 2014

- Experienced with full software development life cycle while leading a team of web and database developers in the implementation of complex projects.
- Worked closely with business development team on strategic initiatives
- Created and lead DevOps Team at DP DHL US in order to improve communication and collaboration between development and operations teams.
- Responsible for collecting requirements from business users; translating requirements into wireframes and mockups; presenting finished web concepts to business users for sign off.
- Architected solutions and developed specifications and supporting technical documentation used in development of solutions, including database diagrams and object oriented models.
- Brought innovative solutions to complex problems in the areas of tracking, reporting, order handling and transactional data processing systems.
- Led development of unified tracking solution for all regions of DP DHL Mail division
- Developed an HTML5 logistics reporting platform with a flexible architecture to allow new reports to be designed in minutes and exported in a variety of physical file formats.
- Designed custom Oracle replication solution to move large volumes of application data from 19 remote facilities into a single central database.
- Architected and Developed three different versions of a web based reporting portal over a period of 7 years. Application features a drag and drop user interface, customizable reports, physical file generation and map based reporting.
- Architected a data mart and refreshing engine utilizing advanced Oracle data warehousing techniques to facilitate reporting on transactional data using web applications.
- Designed and implemented a customer order system, including JavaScript enabled user interface for order entry, creating bill of lading documents on demand in the Adobe PDF format, and full integration with transportation system using XML based web services.

Web Developer

Aquent

2004 – 2005

- Consulted on a variety of projects for companies in the Atlanta, GA area.
- Developed content management system and CSS template for Ryla Teleservices website, as well as search engine, print template, contact form and a dynamic site map.
- Developed a Document Management tool for Enterprise Capital Management, used to maintain documents related to various mutual funds. The tool enabled staff members to more efficiently manage over 800 online documents, increasing overall productivity. The front-end display pages were then integrated into the Enterprise website to seamlessly display the literature entries on the appropriate mutual fund pages.

Web Developer/Producer

Knight-Ridder Digital

1999 - 2004

- Designed, developed and posted content to numerous newspaper web sites including The State (Columbia, SC), the Myrtle Beach Sun News and other medium size market newspapers.
- Developed a football site for The State newspaper in Columbia, SC. The site was able to support content for multiple football sites, including GoGamecocks.com and HowardsRock.com (Clemson Tigers), using a single set of administrative tools. The sites featured various functionality, including articles, player profiles, player and game stats, photo galleries, multimedia, and user polls.
- Integrated multiple newspaper content systems with databases to feed articles to web sites.
- Produced and edited numerous video clips for display on news sites using digital video camera and Adobe Premiere. Worked with Real Audio and Windows Media servers.

Education

B.S. Technical Communication, 1999

Minor – Business

Mercer University School of Engineering

Awards

- 2014 DHL First Choice Award Winner
- 2007 DHL Delivering Excellence Nominee

Training and Certifications

- Situational Leadership
- Project Management Principles and Practice
- Six Sigma Green Belt
- Object Oriented Analysis and Design with UML
- Java Programming
